

Aim:

Write a program to **sort** (**Ascending order**) the given elements using **merge sort** technique.

At the time of execution, the program should print the message on the console as:

Enter array size :

For example, if the user gives the **input** as:

Enter array size : 5

Next, the program should print the following message on the console as:

Enter 5 elements :

if the user gives the **input** as:

Enter 5 elements : 34 67 12 45 22

then the program should **print** the result as:

Before sorting the elements are : 34 67 12 45 22

After sorting the elements are : 12 22 34 45 67

Note: Do use the **printf()** function with a **newline** character (**\n**).
