Aim:

Write a C program to reverse the links (not just displaying) of a linked list. Note: Add node at the beginning.

Source Code:

reverseLinkedList.c

```
#include <stdio.h>
#include <stdlib.h>
struct Node
   int data;
   struct Node* next;
};
static void reverse(struct Node** head_ref)
   struct Node* prev = NULL;
   struct Node* current = *head_ref;
   struct Node* next = NULL;
   while (current != NULL)
      next = current->next;
      current->next = prev;
      prev = current;current = next;
   *head_ref = prev;
void push(struct Node** head_ref, int new_data)
   struct Node* new_node = (struct Node*) malloc(sizeof(struct Node));
   new node->data = new data;
   new_node->next = (*head_ref);
   (*head_ref) = new_node;
void printList(struct Node* head)
   struct Node* temp = head;
   while (temp != NULL)
      printf("%d", temp->data);
      if ( temp -> next != NULL)
         printf("->");
      temp = temp->next;
   }
}
int main()
   struct Node* head = NULL;
   int i, count = 0, num = 0;
   printf("How many numbers you want to enter:");
```

```
scanf(" %d", &count);
  for (i = 0; i < count; i++)</pre>
      printf("Enter number %d:", i+1);
      scanf(" %d", &num);
      push(&head, num);
  printf("Given linked list:");
  printList(head);
   reverse(&head);
  printf("\nReversed linked list:");
   printList(head);
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
How many numbers you want to enter: 4
Enter number 1: 6
Enter number 2: 1
Enter number 3: 8
Enter number 4: 5
Given linked list:5->8->1->6
Reversed linked list:6->1->8->5

```
Test Case - 2
User Output
How many numbers you want to enter: 2
Enter number 1:5
Enter number 2:9
Given linked list:9->5
Reversed linked list:5->9
```
